Evolution of homicides and accidents with firearms (2000-2016)

Types of Firearms Used in Fatal Incidents 2000-2016

Zagreb, August 2019

The motive remains unknown (probably family dispute) AK-47 Perpetrator committed suicide

Split, January 2020

Drug-related dispute Kalashnikov-Type Rifle Perpetrator arrested

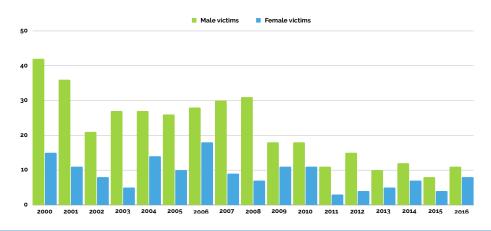

Perpetrators of gun crime

Perpetrators of gun crime data unavailable

Homicide firearm victims: 2000-2016

based on medical data6

Lethal Gun Violence by Gender

^{1.} Data acquired from "World Health Organization. Detailed Mortality Database": https://www.who.int/hgalthinfo/mortality_data/en/, last accessed on 2 May 2020.

2. Literature offers no generally accepted definition of a "public mass shooting." For data collection purposes Sarah Watson's definition will be basis of categorisation for a mass shooting. However, the scope will be further widened to include multiple perpetators, "shootings that occur in the public and/or semi-public space, perpetated by one offender and resulting in three or more randomly selected victims, with at least one fatality. The term victim refers to those fatality shot and those injured; however, it does not include the perpetrator." Watson, S., (2022), Mass shootings, fatality thresholds and defining by numbers: Political and social consequences. Criminology & Criminal Justice, vol. 1 no, 19, pg. 4.

Seizures 2007-2017

Firearms seized

1,331°

Rounds of ammunition seized (2016-2017)

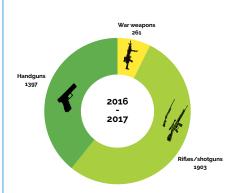

267[°]

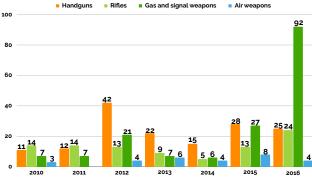

Parts and components seized (2016-2017)

Seizures

Types of firearms seized 11

The number of firearms seized at state borders 2010-2016¹

While, the general firearms seizure data indicate a decrease in the number of seized firearms, an increase in the number of firearms seizures at the country's borders can be observed.

Trafficking

Although Croatia holds the reputation of being a source and destination country for illegal firearms trafficking, the lack of sufficient data impedes a clear intelligence picture on the matter. 13

In the years that followed the Homeland War, Croatia had to deal with a surplus of weapons that were no longer needed in such large quantities. According to sources, by 2012 Croatia had exported weapons and ammunition worth €126 million to Saudi Arabia and €44 million to Jordan. 14

Following reports based on which many planeloads of weapons from Croatia were illegally diverted to war zones, the national authorities stated that Croatia has never sold weapons to crisis areas. However, the country claimed that they do not have control over the further sale or transfer of the purchased weapons. As a result, these weapons can very easily come into the possession of combatants from either side of a conflict and then end up on the illegal market. They could even be smuggled back into Europe.

Possession

The Small Arms Survey estimates that, as of 2017, there are 576,000 firearms held by civilians in Bulgaria. Of those in circulation, 390,000 are registered, while the remaining 186,000 are considered unregistered.

The widespread availability of illicit firearms in Croatia due to a number of historical and (geo)political factors, such as the legacy of the Homeland War, the geographical location of the country on the Balkan route, corruption, and organized crime, has made illegal possession of guns a considerable national problem. Interestingly, the local illicit market of firearms is relatively small. That is due to the big interest of Croatians to own guns for individual use rather than trade them.
